

Cuisine By Choice

Create design and style for a website

Purpose of the website and mobile app

A website where you can find restaurants by location worldwide. It is possible to see reviews of the restaurants by other people and filter the search by cuisines and how many likes it has.

Application build with

A single page application build with React.

Assignment

You have to design and style the web application based on the mockup.

If your experience and education provide you with a more qualified idea of design than the mockup you are most welcome to incorporate it.

We will deliver *startup code* with dummy data monday 30. April 2018.

The backend, API and all the functionalities we are going to make ourselves.

General requirements

Web design must be responsive.

We expect the result to be delivered in HTML, CSS, Bootstrap, Reactstrap, JavaScript, Material UI and React.

Due date:

The finished and corrected design need to be delivered **no later than April 4. 2018**

Style

Elegant and discrete/smooth since it will display images of different styles and color themes.

Wanted (but negotiable) **color scheme**: Planeta by Larissa Ramos from Adobe Color CC
<https://color.adobe.com/Planeta-color-theme-10636033/?showPublished=true&action=downloadTheme>

Percentage pr color. White: min 50 %, dark green: max 15 middlegreen: max 10 light green: max 20% orange max 5%. Text must be in black or another suitable dark color matching the color scheme.

Mock-up specification web-app:

1. Header

The header could contain logo and name or it could have a header picture like these examples. It is the designers choice.

2. Top navigation bar

Nav links : Home and About - and a login with text-input for name and password. Error login could be showed in the error view component or in a field just below the login. It is the designers choice.

3. Check boxes for search field

Three unfoldable menus where you can set your searchfilter.

- Cuisine checkboxes labeled ex. Fast food, family, local and gourmet
- Price range checkboxes labeled cheap, medium, expensive
- Number of reviews * labeled 1, 2, 3, 4, 5

It should be possible for us to change the parameter for the search filters.

4. Search location

Text input field/search field where you can type location. When you start typing suggested locations will appear as a scroll down menu beneath the search field .

You enter your search by pressing enter or the search icon button to the right

5. Show search results

A list of restaurant matching the search results will appear here with venue image (thumbnail), venue names, likes or other rankings, price range, address.

5B. - Above table - filters ex. Price range : medium, Cuisine: Thai, Open: now.

5C. - A simple table that shows venue picture, review, a link to the restaurant and maybe other information. That is up to the designer to decide the look of the tables.

It is important that one of the foursquare logos are on the top of the table.

5D. - A list of static based on user search.

5F. - Table of statistics based on location containing number of visits , review average,

Season popularity (number of visits per season) perhaps other data need more info from our customer.

5G. - Show **table of users**. A table that shows all the users with user name, user role and email. And the possibility to make CRUD operations on the users.

5H. - **A form** where you can edit or create a new user. The password field only shows when the admin press new user.

5i. - Show table of **user history**. Containing user name, user profile photo, user search, user checkins, user photos, venues visited by user, venues a user liked ect.

6. Footer

Name small logo contact for us.

7. Top Navigation bar when logged in as user

Home - user history- user profile- logged in as : username (display username)

7B. Top Navigation bar when logged in as admin

Will contain: Home - Userlist- logged in as : admin name (display admin name)

8. Submit button for search location

9. Registration and user profile form

Four text input fields with default values or registered user information and a submit button
